

Epos System

Credit Cards

Multi Retail

Profitable Epos
made simple...

Reasons for buying epos

Speed at the Till

Card authorisation is done via broadband connection rather than a telephone line which dramatically increases transaction speed.

Accuracy

Integrated card systems ensure there is no wrong entry of amounts as the payment due is automatically generated by the till.

Security

Our card agency is Verifone, whose Chip & PIN devices are fully PCI DSS compliant and no card information is stored in the Epos system, so transactions are safe and secure.

Transaction Tracking

Real-time, instant reporting of every transaction, allowing you to check if payment has gone through and trace historical sales.

Cash-back Service

Offering a cash-back service reduces the amount of money held in the cash drawer and therefore reduces insurance premiums.

Quicker Printing

Card receipts are printed from the till rather than the card terminal, speeding up time at the till.
